Purchase Request Lifecycle

Step 1: Frontend Receives Request

The frontend service exposes a POST endpoint at /purchase/:id. This endpoint receives requests from the client (such as a web browser). The request body contains the number of copies the user wants to purchase.

Step 2: Round-Robin Service Selection

The frontend service uses a round-robin algorithm to select which catalog service and order service to use. It rotates between catalog-service-1 and catalog-service-2, and between order-service-1 and order-service-2.

Step 3: Forward Request to Order Service

The frontend forwards the purchase request to the selected order service using a POST request to /PurchaseBook/:id, including the quantity and selected catalog service name in the body.

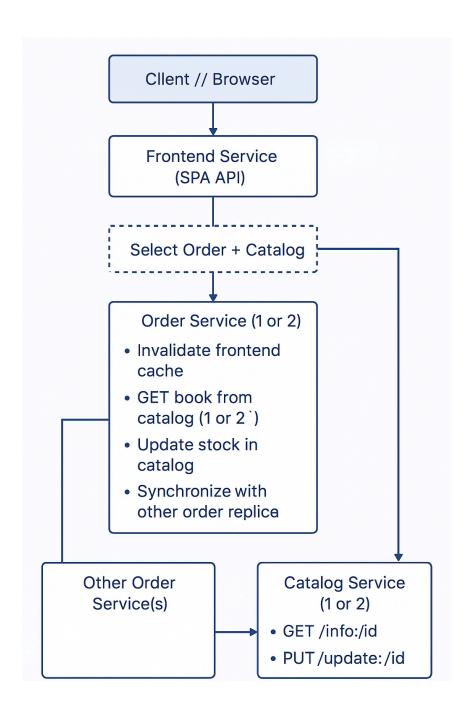

Step 4: Order Service Handles Purchase

The selected order service processes the purchase by:

- Invalidating the frontend cache for the book ID
- Fetching the book info from the selected catalog service
- Checking available stock
- Updating the stock in the catalog if enough is available
- Synchronizing the update with other order service replicas
- Inserting the order into its own SQLite database
- Returning a success or error response

Step 5: Response Sent to Client

The response from the order service is returned to the frontend service, which logs the activity and sends the final result back to the client.

Performance

• Before caching:

computed the average of 10 requests per query type

```
front-end-service | Average Response Time after 10 requests: 11.70 ms
front-end-service | Average Response Time after 10 requests: 71.80 ms
```

After caching

- First, the cache will be empty so every access will be a miss, but after that the hit rate will start to increase.
- in the image the first 10 requests had 4 misses, which is why the average response time was 6.80, but in the next 10 requests there was only 1 miss so the average response time was significantly decreased to 1.20.

```
front-end-service | Cache miss for topic : distributed systems |
front-end-service | Cache hit for topic : distributed systems |
front-end-service | Cache miss for topic : undergraduate school |
front-end-service | Cache miss for topic : undergraduate school |
front-end-service | Cache miss for book with id : 1 |
front-end-service | Cache hit for book with id : 1 |
front-end-service | Cache hit for topic : undergraduate school |
front-end-service | Cache hit for book with id : 3 |
front-end-service | Cache miss for book with id : 3 |
front-end-service | Cache miss for book with id : 3 |
front-end-service | Cache hit for book with id : 3 |
front-end-service | Cache hit for topic : undergraduate school |
front-end-service | Cache hit for topic : distributed systems |
front-end-service | Cache hit for book with id : 3 |
front-end-service | Cache hit for book with id : 1 |
front-end-service | Cache hit for book with id : 2 |
front-end-service | Cache hit for book with id : 1 |
front-end-service | Cache hit for book with id : 3 |
front-end-service | Cache hit for book with id : 1 |
front-end-service | Cache hit for book with id : 1 |
front-end-service | Cache hit for book with id : 1 |
front-end-service | Cache hit for book with id : 1 |
front-end-service | Cache hit for book with id : 1 |
front-end-service | Cache hit for book with id : 1 |
front-end-service | Cache hit for book with id : 1 |
front-end-service | Cache hit for book with id : 1 |
front-end-service | Cache hit for book with id : 1 |
front-end-service | Cache hit for book with id : 1 |
front-end-service | Cache hit for book with id : 1 |
front-end-service | Cache hit for book with id : 1 |
front-end-service | Cache hit for book with id : 1 |
front-end-service | Cache hit for book with id : 1 |
front-end-service | Cache hit for book with id : 1 |
front-end-service | Cache hit for book with id : 1 |
front-end-service | Cache hit for book with id : 1 |
front-end-service | Cache hit for book with id : 1 |
front-end-service | Cache hit for book with id : 1
```
